Create an interactive dashboard in IBM Cognos Analytics using Olympics dataset to perform a detailed annual analysis. The dashboard should display Athlete names, medal counts, and medal types etc. Include multiple visual components like charts, graphs, and KPI indicators to provide a comprehensive view of the Olympic data module performance. The dashboard should help in identifying trends, comparisons, and result points for Olympic data module decision-making and presentation of the annual report.

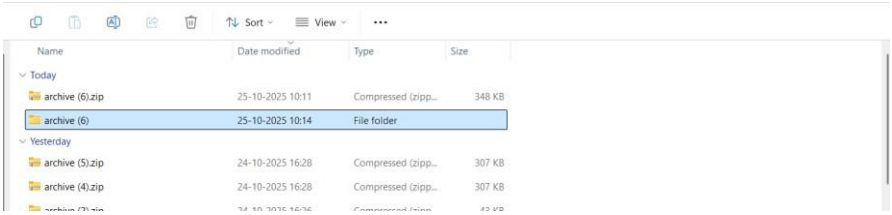

Step 1: Step 1: Sign in Kaggle and then Click on Datasets and choose the Hospital Beds Management and download some files mostly 4-5 files to analyze a process.

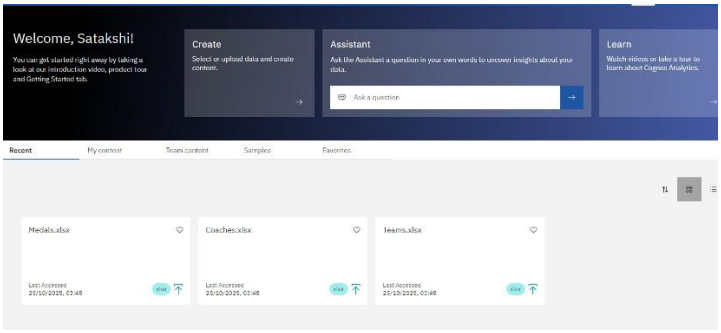

Step 2: Go to File Explorer and right click on archive and then click on Extract files.

Step 3: After that we open the archive that show File folder not a ZIP archive.

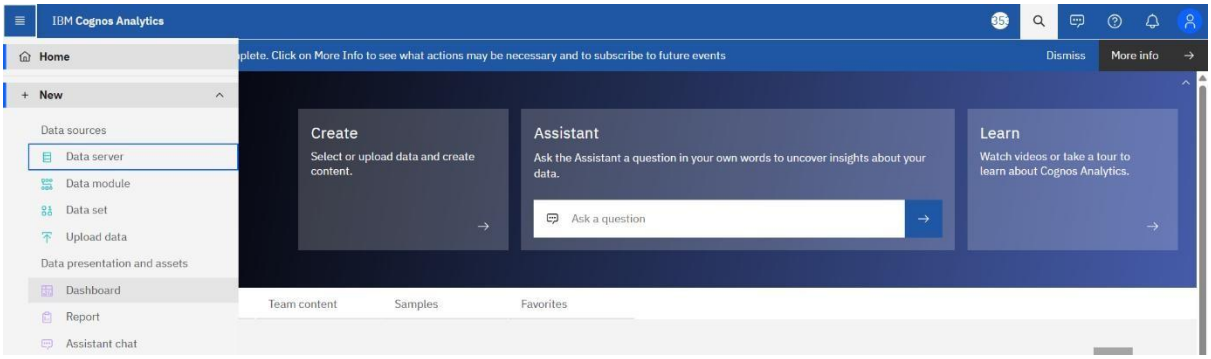

Step 4:Login the IBM Cognos and then Click Launch.

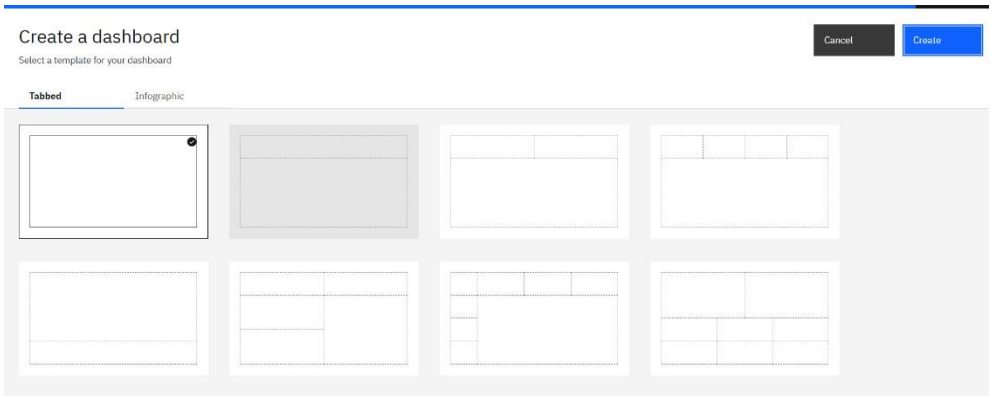

Step 5: We are Click the three dot and after that I click the new and then click the Dashboard option.

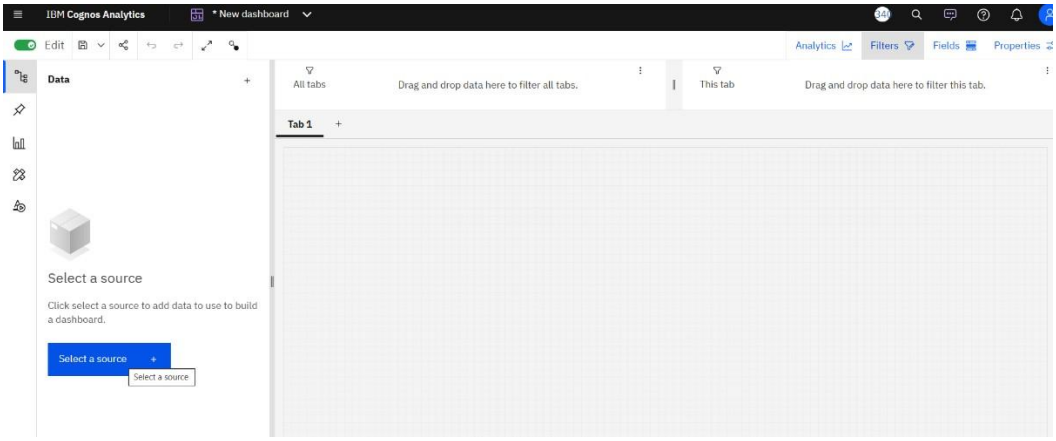

.

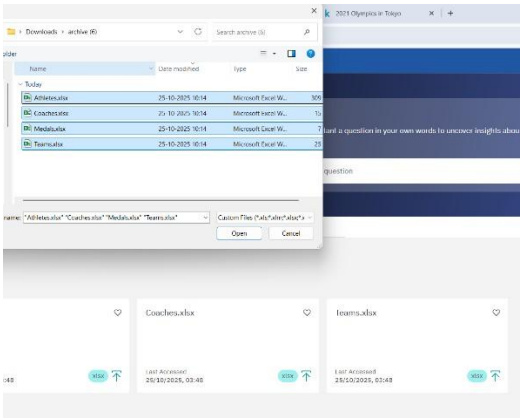

Step 6: Click on the Tabbed and select Blank page and click on Create.

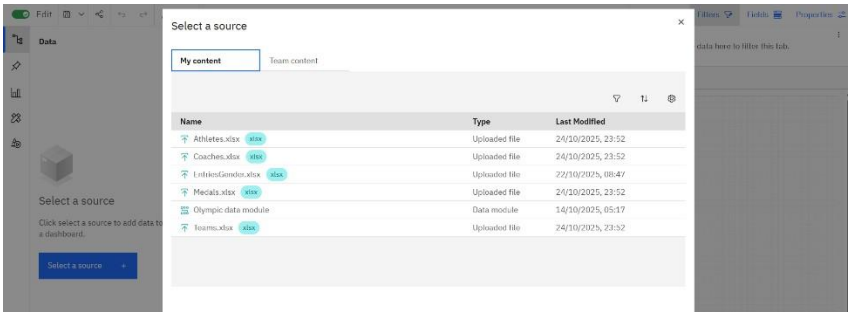

Step 7: After that click on the Select a source option.

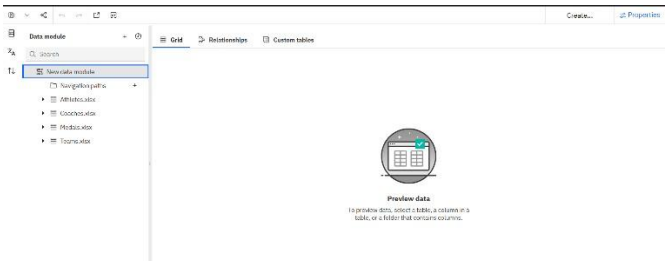

Step 8: Then go to File Explorer and click on the Downloads and then select all files by pressing ctri key and click all files one by one after that all files selected are shown File name box and then click open button but before clicking open button we select My content Source.

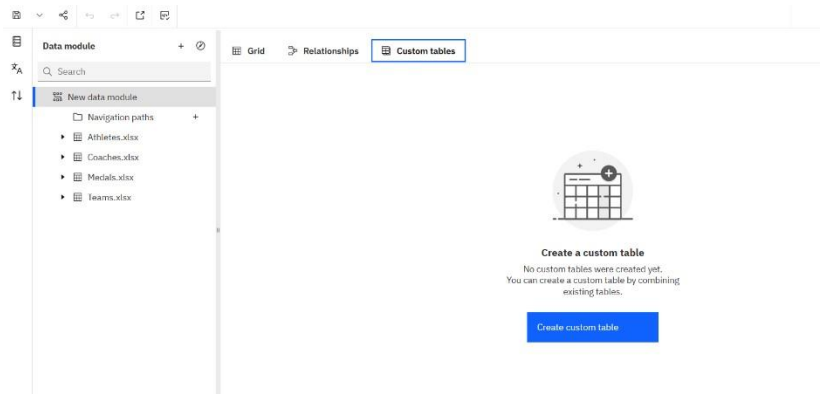

Step 9: After clicking the open button all files are upload in the My content.

Step 10: After that we click on the New data module and many option are appear like Grid , Relationships and Custom tables .

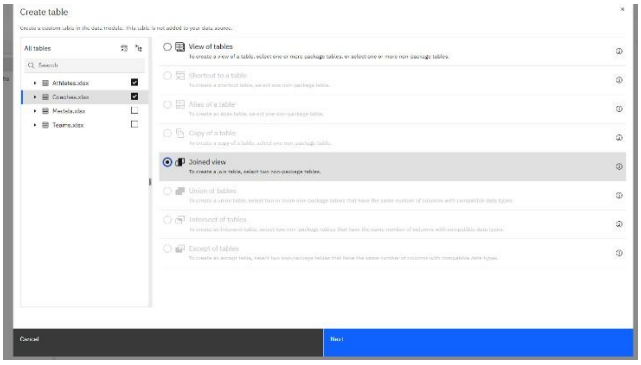

Step 11: We can click on the Custom tables and after that click on the Create custom table appear in the working area.

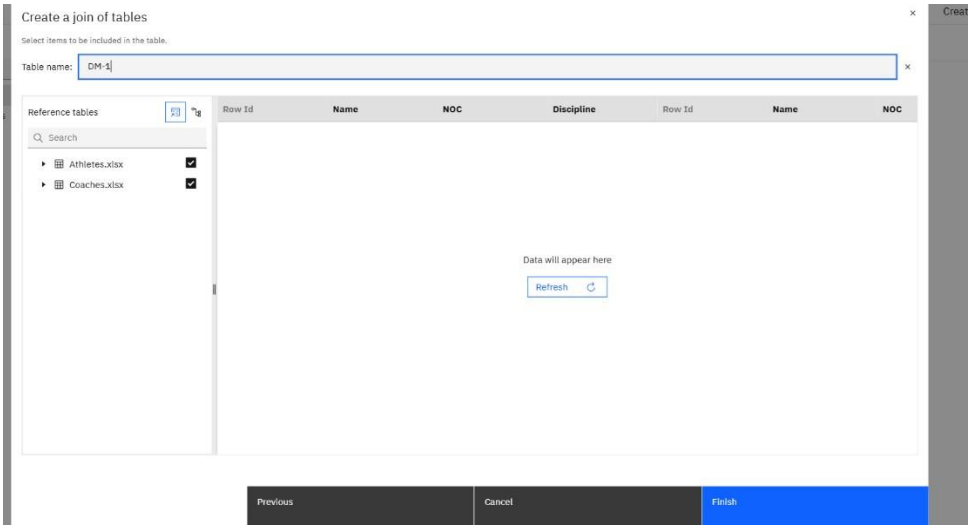

Step 1

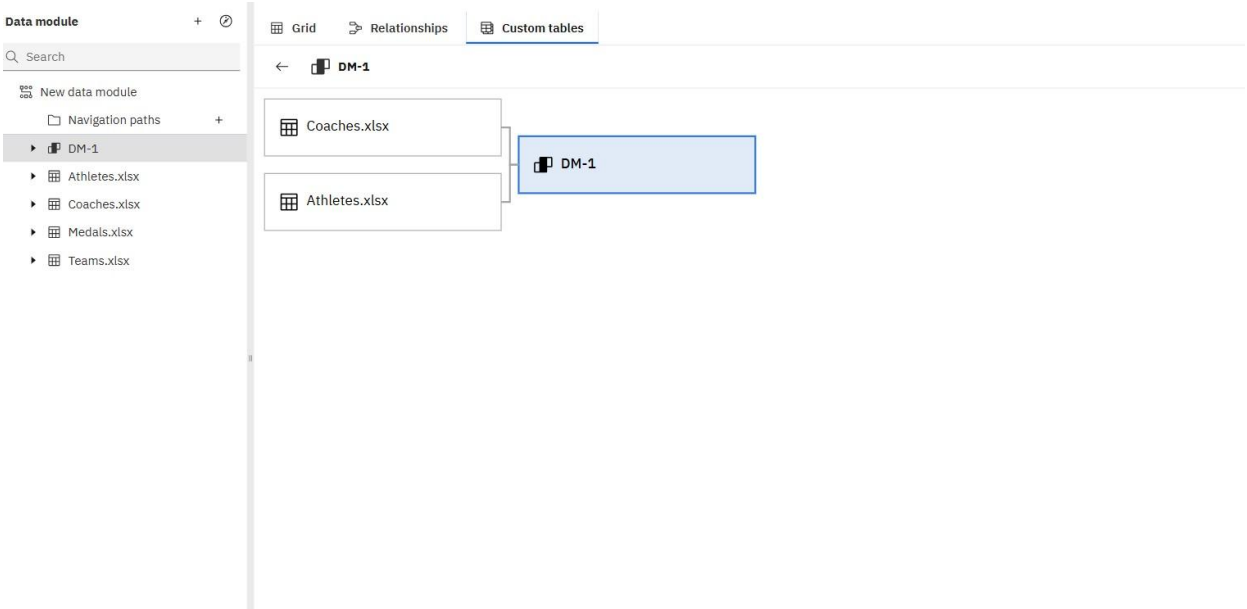

2: After that select the the two files that shown below in the image and then click on the Joined view option.

Step 13: After selected these two files we can click on the Finish button.

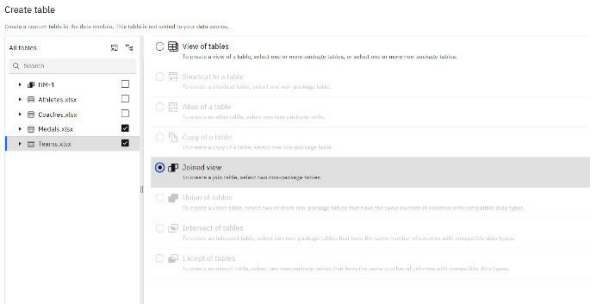

Step 14: After click on the finish button we can see the two box which are connected with DM -1 parent box we can change the DM- 1 name before connecting these figure

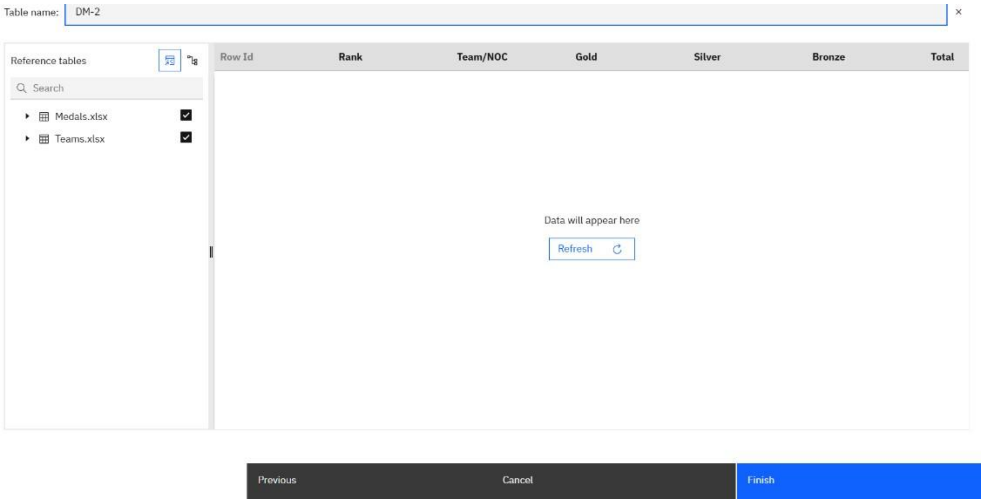

Step 1

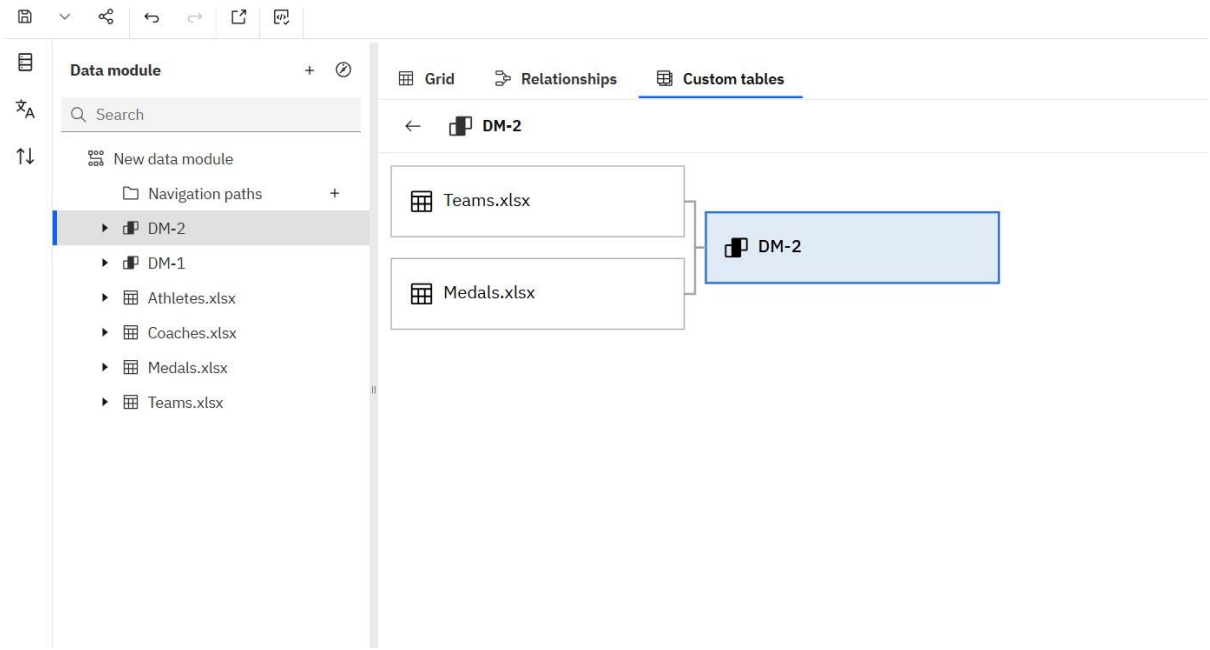

5: We can select the last two file and then click on the Joined view option and click on the Next button.

Step 16: After click Next button one page is open where we can write DM-2 in Table name and click Finish button.

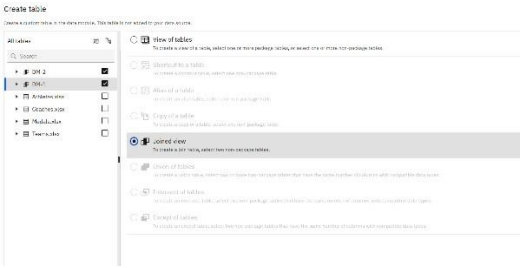

Step 17: After click finish button we can display row entity relation with name DM-2.

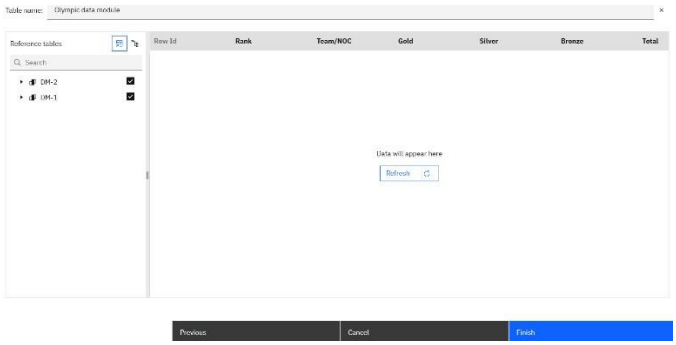

Step 1

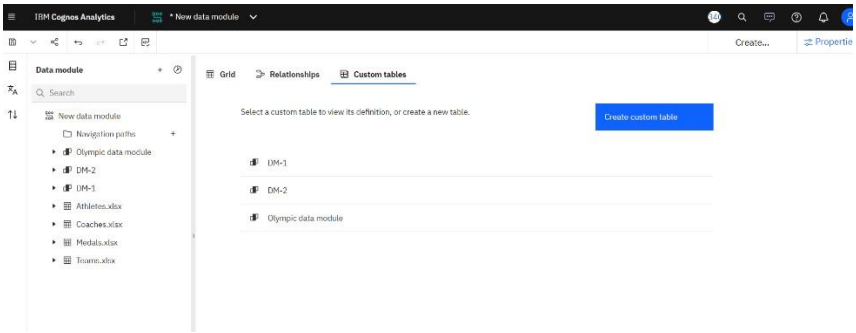

8: After formed both table named DM-1 and DM-2 we can select both table and after that click Joined view option and then click Next button.

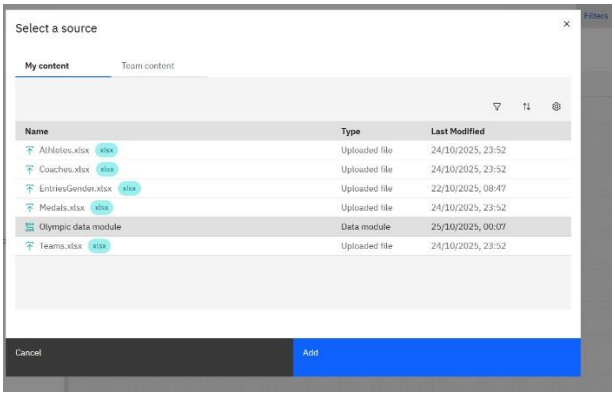

Step 19: After that we can rename the Table name we give name Hospital data module and after that click on the Finish button.

Step 20: After that click on the Olympic data module and then click on the Hospital Data module and then click on the Create custom table option that appear in the blue box in working area.

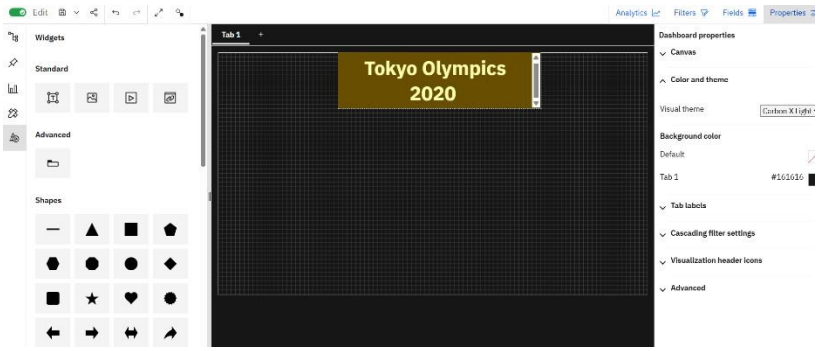

Step 21: After that we Select a source and click on the My content and select all files and click on the Add button.

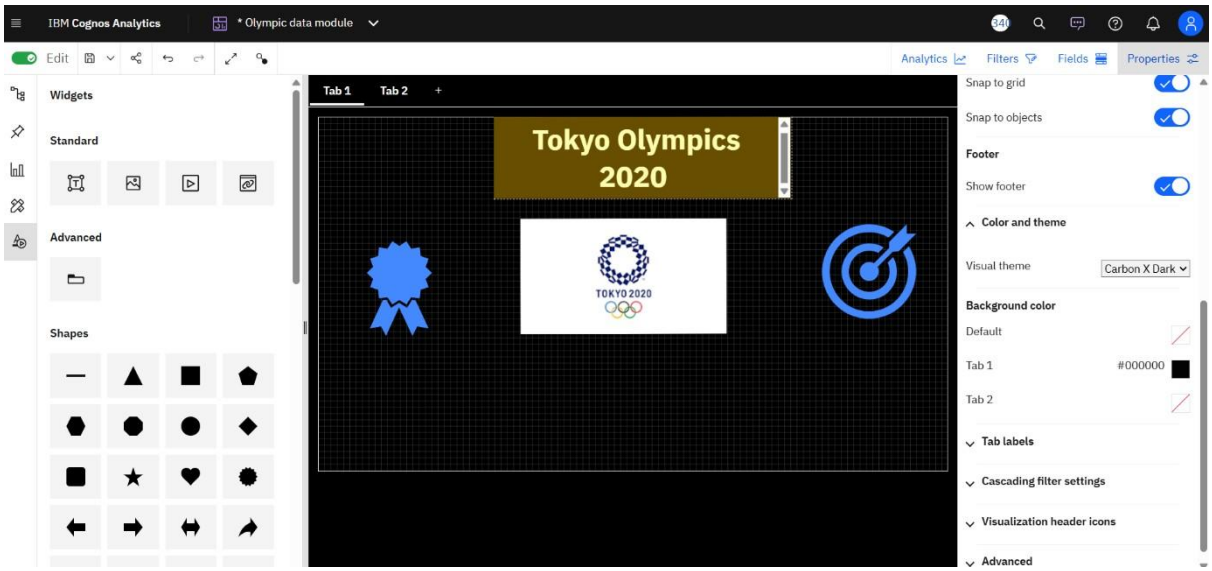

Step 22: After that all the files and table which we can formed by merging the two files are also add and display in the Olympic data module.

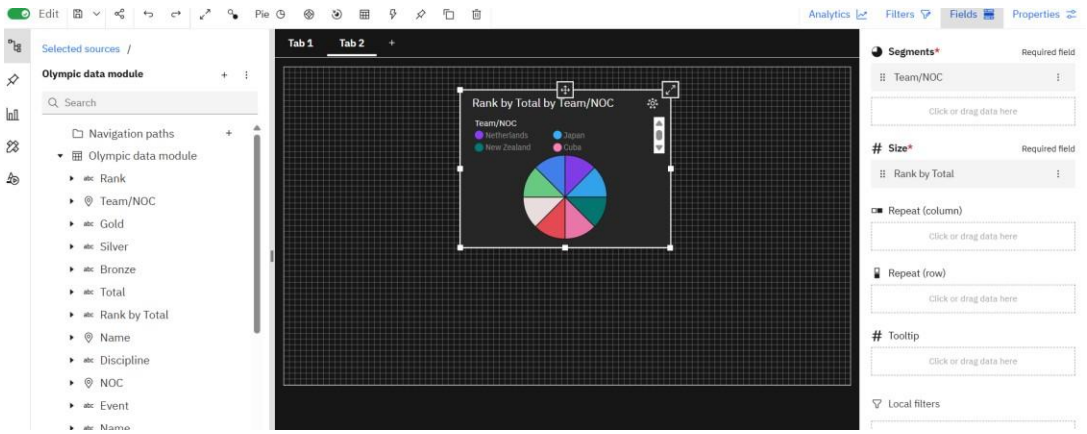

Step 23: We can click on the Widgets option and select the Text option present in the Standard column and here we can also change the Border color and Fill color that present in the Appearance in the General option under the Properties.

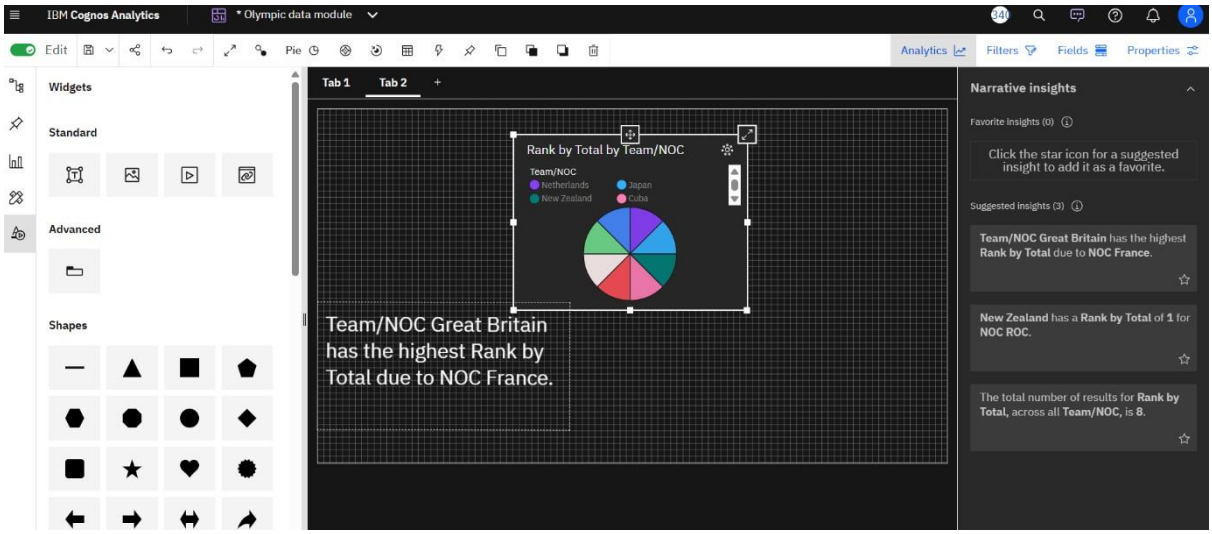

Step 22: We can add image by select the image option and copy the image address and paste in the box in image selected area and then click enter button then image should be inserted

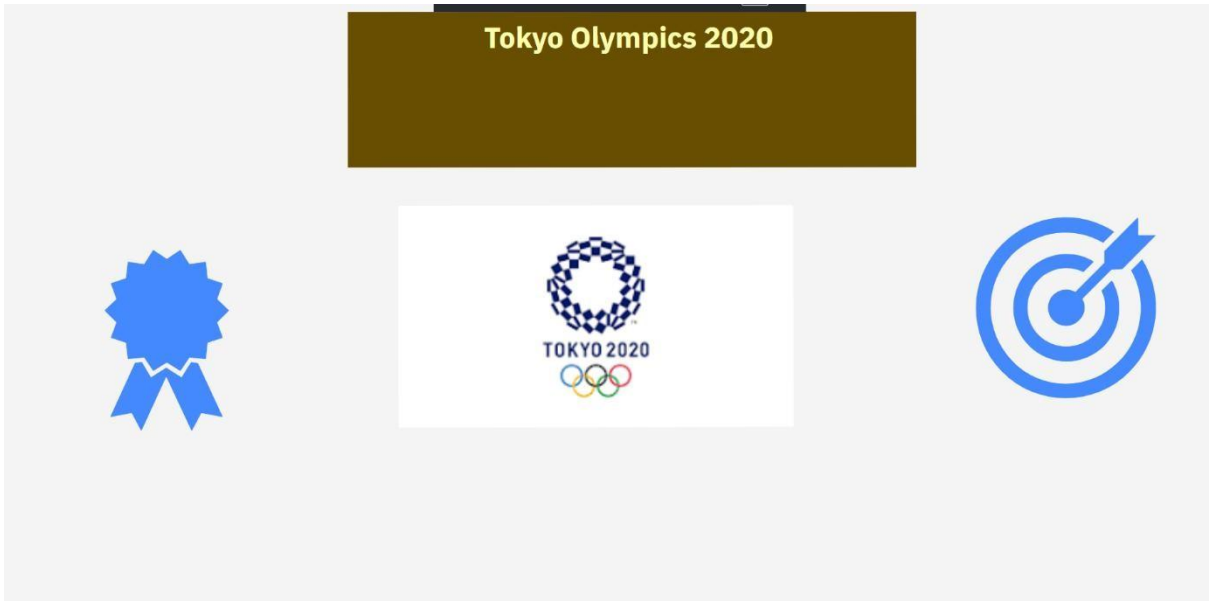

Step 23: After that we can choose the pie charts present in the Visualization option and here some fields are appear and we can click on the olympic data module and choose Team/NOC In segments box And rank by total in size box

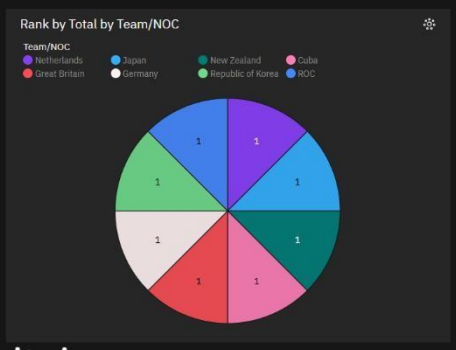

Step 24: We can insert the Text option and select the pie graph that formed in working area and after that click on the Analytics and click on the Narrative Insights and choose the para according to your choice and copy the para and paste in the insert text.

Step 25: After done all the steps the finally we can click on the run option and we see the updated output

Team/NOC Great Britain has the highest Rank by Total due to NOC France.
